

CMMS PLATFORM

Computerised Maintenance Management

Software Solution

A purpose-built maintenance platform for renewable energy assets — enabling planned, reactive, and predictive maintenance workflows across wind, solar, and hybrid portfolios.

It acts as the operational backbone for field teams, asset managers, and reliability engineers to plan, execute, and track all maintenance activity from a single system.

ONE PLATFORM ZERO DOWNTIME

Smarter maintenance. Fewer failures.

Live

Work Order Tracking

KEY FEATURES

Work Order Management

Create, assign, and track corrective & preventive work orders with full approval workflows.

Preventive Maintenance

Schedule recurring maintenance tasks by interval, run-hours, or calendar triggers.

Predictive Maintenance

Compare expected vs actual performance curves to detect degradation before failure.

Spare Parts & Inventory

Track stock levels, reorder points, and site-wise inventory with MTBF-based planning.

Escalation & Alerts

Auto-escalate overdue work orders. Threshold-based alerts for critical asset health.

Technician & Team Management

Assign tasks to field teams by skill, availability, and site. Track completion rates.

MTTR & MTBF Tracking

Measure Mean Time to Repair and Between Failures for all assets and breakdown types.

Audit Trail & Compliance

Full traceability of work orders, part usage, approvals, and maintenance history.

ADVANTAGES

Zero Unplanned Downtime

Single Asset View

Faster Mean Time to Repair

Inventory Cost Reduction

Compliance & Audit Ready

Scalable Across Portfolio

HOW IT WORKS

01

Capture

Auto work orders from SCADA alerts, inspections, and PM schedules.

02

Execute

Technicians execute tasks and log work details on-site.

03

Validate

Supervisors approve jobs; metrics update automatically.

04

Analyse

Reports reveal trends, losses, and improvement areas.

DGR + CMMS Together: When CMMS is added to the DGR Platform, intelligent maintenance schedules become fully automated plans — linking generation data, breakdown events, and maintenance outcomes in one unified system.

Workflow Coverage

Live KPIs — open WOs, asset health, upcoming PMs

Create, assign, track corrective & planned tasks

Calendar-driven preventive maintenance plans

Stock tracking, reorder alerts, site-wise parts

MTTR / MTBF analytics and breakdown categorization

WIND MAINTENANCE TASKS

Scheduled nacelle, blade, and tower inspection checklists

Interval-based oil sampling and replacement work orders

Periodic leading-edge erosion assessment and remediation

Calibration of pitch angle and yaw drive systems

Mechanical brake pad inspection and torque verification

Thermographic scan and insulation resistance testing

Wind speed, temperature, and vibration sensor accuracy checks

Compare actual vs expected output across wind speed bands

Corrective work orders with fault categorization and RCA

Controlled shutdown procedures linked to grid curtailment

Work-at-height, lock-out/tag-out, and PPE compliance records

Unplanned Downtime

Technician Efficiency

Spare Parts Cost

Work Order Traceability

Report Scheduler

DGR PLATFORM

Daily Generation Reporting

Software Solution

A centralized platform used by renewable energy companies to record, validate, analyze, and report daily electricity generation data.

It acts as the nerve center for tracking generation, identifying performance issues, and ensuring data transparency across technical, commercial, and managerial teams.

ONE PLATFORM
TOTAL VISIBILITY

Less manual work.
Less coordinaton overhead.

KEY FEATURES

 Data Ingestion Import from SCADA or Excel. Manual uploads supported.	 Validation Engine Cross-checks data vs target, AOP, topline. Flags mismatches.	 Approval Workflow Multi-level approval — Site Engineer → Manager with downstream triggers.	 Audit Trail & Logs Full traceability of edits, approvals, and data corrections.
 Escalation Tracking Tags BD issues. Auto-escalation on thresholds like PR < X%.	 User Role Management AES-encrypted login. Role-based access to all modules.	 Reports & Dashboards Daily/Monthly/Yearly summaries MIS and KPI comparison reports	

ADVANTAGES

Single Platform All generation data unified in one centralized system—across wind, solar, and hybrid assets. No more juggling multiple tools or reconciling inconsistent numbers.	Data Accuracy Automated validation engines continuously check incoming data against targets, historical trends, and predefined rules. The result is clean, trusted data that teams can rely on without manual verification or last-minute corrections.
Real-Time Insights Live dashboards and intelligent alerts surface issues the moment they occur. From generation dips too perceptional anomalies, teams can react faster, prioritize effectively, and prevent small issues from escalating.	Role-Based Access Granular permission controls ensure every user sees only what's relevant to them. Site teams, managers, and leadership each get tailored views—improving focus, security, and decision speed.
Revenue Assurance Early identification of under performance, meter inconsistencies, and loss drivers helps protect generation outcomes. Accurate attribution of issues ensures operational and commercial teams stay aligned on performance impact.	Scalability Designed to grow with your portfolio. Easily extend the platform across new regions, additional sites, and future asset types— without increasing operational complexity or reporting effort.

MODULES

& Report Coverage

- 

Dashboard

Energy generation overview — cards & graphs
- 

File Upload

DGR Excel/CSV automation file ingestion
- 

Import Approval

Approve or reject uploaded data batches
- 

Heat Map

Visual performance across sites/regions
- 

Bulk Calculate

Run bulk daily calculations on demand

WIND VIEWS & REPORTS	SOLAR VIEWS & REPORTS
Generation Summary Daily energy by WTG or site	Generation Summary Inverter-wise or site-wise solar output
Daily Target KPI Actual vs daily targets	1 Min GHI & POA Irradiance data at 1-minute intervals
Daily Load Shedding Grid loss, curtailment, downtime	15 Min GHI & POA Irradiance data at 15-minute intervals
Monthly Target KPI Monthly generation vs KPI	Daily Target KPI Daily performance targets
Monthly LineLoss Energy loss via line/transmission	Daily Load Shedding Losses from grid/maintenance
Breakdown Reports Faults & downtime categorized	Monthly Target KPI Monthly target vs actual analysis
Expected Vs Actual Forecast vs actual generation	AC DC Capacity Site inverter and panel capacity
Power Curve WTG output vs wind speed	Breakdown Reports Faults & downtime with remarks
MTTR & MTBF Mean time to repair & between failures	Expected Vs Actual Forecast vs actual energy yield
Operational Performance Graphs & remarks per BD/site	Tracker Loss Losses from tracker malfunction
Breakdown Categories Categorized reasons for gen loss	MTTR & MTBF Maintenance performance metrics

Renewable Energy Asset Management

Maintenance that Protects Uptime.

Purpose-built for wind & solar energy assets.

THE PROBLEM

⚠ Work orders too late

⚠ Missed PM schedules

⚠ No asset visibility

⚠ Paper & Excel tracking

⚠ Parts unavailable

⚠ Failures → Gen. loss

THE SOLUTION

Planned. Connected. Intelligent.

CAPTURE

Auto-create work orders from SCADA alerts & PM schedules

EXECUTE

Technicians log work, parts & time on mobile, on-site

VALIDATE

Digital approvals; MTTR & MTBF auto-updated

ANALYSE

Dashboards reveal trends & loss drivers

MEASURABLE OUTCOMES

Unplanned Downtime

Technician Efficiency

Spare Parts Cost

Work Order Traceability

WHY SustainXTech CMMS & DGR

✓ Zero missed PMs

✓ Full traceability

✓ Real-time view

✓ Faster repairs

✓ Clear ownership

CMMS PLATFORM

Sustain X Tech

MANAGE · MONITOR · MAINTAIN

*Your wind or solar site doesn't fail all at once.
It fails quietly.*

A missed PM. A part that didn't arrive. A work order that sat in someone's inbox.
Then one day: Downtime. Lost generation. Uncomfortable calls.

**Most asset owners don't have a maintenance problem.
They have a visibility problem.**

THE OLD WAY

→ Work orders created too late

Reactive response, not prevention

→ PM schedules missed

No automated scheduling or reminders

→ Assets spread across spreadsheets

Fragmented data, no single source of truth

→ Failures found after revenue is lost

Downtime discovered, not prevented

Maintenance shouldn't react. It should protect uptime.

HOW MODERN TEAMS RUN MAINTENANCE TODAY

Built specifically for wind & solar assets.

01 CAPTURE

SCADA alerts automatically become work orders.
PMs schedule themselves. Nothing slips through.

02 EXECUTE

Technicians log work, parts, and time —
mobile, on-site, in real time.

03 VALIDATE

Digital approvals. MTTR and MTBF updated instantly.
No guesswork.

04 ANALYZE

Dashboards show trends before failures happen.
You see what broke — and what's about to.

THE RESULT

↓ UNPLANNED DOWNTIME
Less failure. More generation.

↑ TECH EFFICIENCY
Faster work. Better outcomes.

↓ SPARE PARTS COST
Smart inventory. Zero waste.

100% TRACEABILITY
Every work order. Accounted for.

*Because in renewable energy,
every hour matters.*

Sustain XTech

MANAGE · MONITOR · MAINTAIN

Your operation doesn't break in one moment.

It breaks in missed details.

THE OLD WAY

- Work orders lost in emails
- Assets across spreadsheets
- PMs done when someone remembers
- Failures found after shutdown

REACTIVE

FRAGMENTED

COSTLY

**Maintenance shouldn't
chase problems — it should prevent them.**

A MODERN CMMS, BUILT FOR REAL OPERATIONS

01 CAPTURE

Work requests, inspections, and alerts become structured work orders instantly.

Nothing missed. Nothing buried.

02 EXECUTE

Technicians log labor, parts, and notes on-site, in real time.

Clear tasks. Clear accountability.

03 CONTROL

Approvals, PM schedules, and asset histories stay in sync automatically.

No guesswork.

04 ANALYZE

Dashboards reveal patterns before breakdowns happen.

See what failed — and what's about to.

DOWNTIME

↓ **Less**

unplanned

EFFICIENCY

↑ **Higher**

technician output

COSTS

↓ **Lower**

maintenance spend

TRACEABILITY

✓ **Full**

asset history

*Because in operations,
every hour matters.*

SustainXTech

MANAGE · MONITOR · MAINTAIN

YOUR OPERATION DOESN'T FAIL ALL AT ONCE. IT FAILS IN MISSED DETAILS.

One delayed work order.

One PM done too late.

One asset tracked in the wrong place.

Nothing looks broken — until it is.

MAINTENANCE Shouldn't **CHASE PROBLEMS.**
IT SHOULD PREVENT THEM.

A MODERN CMMS BUILT FOR REAL OPERATIONS

01 CAPTURE

Work requests, inspections, alerts instantly become structured work

Nothing missed. Nothing buried.

02 EXECUTE

Technicians log labor, parts, and notes on-site, in real time.

Clear tasks. Clear accountability.

03 CONTROL

PM schedules and asset history stay in sync automatically.

No guesswork.

04 ANALYZE

Dashboards show trends before breakdowns happen.

See what failed—and what's about to.

RESULTS

↑ LESS

Unplanned Downtime

↑ HIGHER

Technician Efficiency

✓ FULL

Asset traceability

✓ FULL

Asset traceability

Because in operations,
EVERY HOUR MATTERS.

Your renewable energy data is lying to you.

SustainXTech

MANAGE · MONITOR · MAINTAIN

Spreadsheets.
Emails.
Manual approvals.
Delayed reports.

It works. Until one bad day costs you revenue.

That's why we built **'SustainX Tech**

The **nerve center** for Wind & Solar Operations

- **One source of truth** for daily generation
- **Automated validation** against targets & KPIs
- **Real-time alerts** when performance drops
- **Clear approvals** from site to management
- **Audit-ready data.** Always.

No chasing numbers.
No last-minute corrections.
No **"which file is final?"** conversations.

Less manual work | **Lower downtime** | **Faster decisions** | **Protected revenue**

Manage. Monitor. Maintain.

All from one platform.

Still Managing Maintenance The Old Way?

One system. Complete control. Planned. Connected. Intelligent.

THE CHALLENGE

Are you still managing maintenance using...

⚠ Excel spreadsheets

⚠ WhatsApp coordination

⚠ Paper-based job cards

⚠ Manual follow-ups

THIS OFTEN LEADS TO:

Unplanned equipment downtime
Unexpected failures stall operations

Lack of maintenance records
No traceability, no accountability

Inefficient resource planning
Teams react instead of plan ahead

Audit and compliance pressure
No digital trail for regulators

THE SOLUTION: CMMS

A Computerised Maintenance Management System that centralises all maintenance activities on a **single, secure platform.**

KEY CAPABILITIES

Preventive Maintenance
Scheduling
Auto PM triggers on time

Breakdown & Corrective
Maintenance Tracking
Log every failure, fix every

Technician Task Assignment & Monitoring
Right person. Right task. On time.

Asset Lifecycle & Service
History
Complete asset health records

Cost Control & Downtime
Reduction
Track spend, cut waste

Real-Time Dashboards & Management Reports
Decisions backed by live data

BUSINESS BENEFITS

✓ Fewer equipment failures

✓ Faster response & repair

✓ Full ops visibility

✓ Data-driven decisions

✓ Lower operating costs

ONE SYSTEM. COMPLETE CONTROL.

Transition from reactive to planned and predictive maintenance.

The digital backbone for maintenance teams, plant managers, and asset owners.

Reliability. Efficiency. Compliance.

SustainXTech

MANAGE · MONITOR · MAINTAIN

ONE PLATFORM. TOTAL VISIBILITY

Operational Intelligence Built for Renewable Portfolios

A unified data and reporting platform designed exclusively to manage complex wind and solar portfolios without complexity.

100%

Data Visibility

~0

Manual Roll-ups

100%

Audit Readiness

Real-Time

Issue Detection

Real-Time Asset Monitoring

All wind and solar data flows into a single, structured interface.

Predictive Maintenance

DGR's analytics compare expected vs. actual generation, power curves, and breakdown categorisation to pinpoint performance leakage.

Digital Work Order Management

DGR streamlines operational data with secure uploads, multi-level approval workflows, and bulk calculations.

Preventive Maintenance Scheduler

Add the CMMS, and those intelligent schedules become fully automated maintenance plans.

Compliance & Audit Trails

Automated report distribution ensures stakeholders receive audit-ready documentation instantly.

Spare Parts & Inventory Control

DGR provides detailed breakdown categorisation, MTBF/MTTR tracking, and site-wise performance data.

ASSET COVERAGE

Solar PV

Wind Turbines

Grid Substations
